Unpublish site

Build and deployment

Source

Deploy from a branch

Branch

Your GitHub Pages site is currently being built from the `main` branch. [Learn more about configuring the publishing source for your site.](#)

main

/ (root)

Save

Learn how to add a Jekyll theme to your site.

Your site was last deployed to the `github-pages` environment by the `pages build and deployment` workflow. [Learn more about deploying to GitHub Pages using custom workflows](#)

Custom domain

Custom domains allow you to serve your site from a domain other than `erwinar.github.io`. [Learn more about configuring custom domains.](#)

Save

Remove

Enforce HTTPS

Required for your site because you are using the default domain (`erwinar.github.io`)

HTTPS provides a layer of encryption that prevents others from snooping on or tampering with traffic to your site. When HTTPS is enforced, your site will only be served over HTTPS. [Learn more about securing your GitHub Pages site with HTTPS.](#)

IT Fundamentals - Assignments

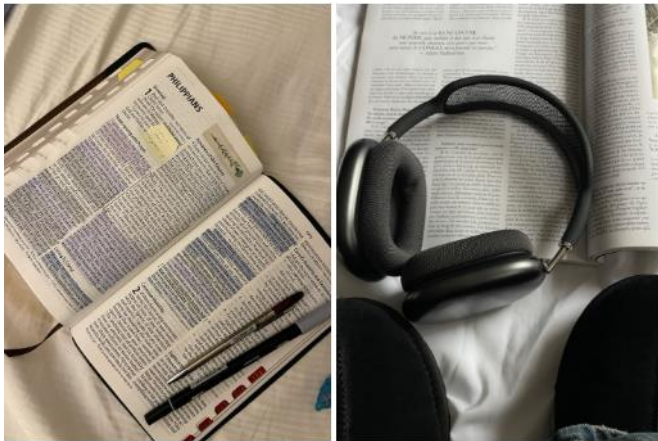

This website contains my IT Fundamentals Assignments. The Assignments are provided as PDF files.

About Me

Welcome! My name is Erwina Rompas. I am a student at Saxion, following the International Software Engineering course.

Born and raised in the Netherlands, I chose the international course to meet students from many different countries.

In my spare time, I like to read, and listen to music.

I uploaded my website to GitHub, enabled GitHub Pages, and verified that all HTML pages and PDF files are accessible online. The screenshots show the repository structure, GitHub Pages configuration, and the live website.
